

### TheLightStrip® Standard Spacing

- Notes:**
1. Measurements are from the house wall (left edge of column.)
  2. Light spacing is identical for TheLightStrip® and TheLightStrip® for Insulated Panels.  
Incorporating a fan into TheLightStrip® for flatpan patio covers is not part of the engineering, and should be done in a separate panel.
  3. Special order for adding lights or changing spacing is available.
  4. Smaller diameter fans should be used on the 10' and 11' lengths to ensure that the lights do not shine through the fan blades.
